

WE'RE HIRING!

Business Analyst Trainee

Company Profile

SVI is one of the premier global companies in the field of IT consulting and business solutions development.

Over the years, SVI has implemented many systems mostly for American companies and for the Philippine government. The USA has been SVI's primary market for the last 30 years. However, in the last 5 years, SVI has embraced AWS cloud computing by developing its own software products that can be offered globally especially for developing countries.

By creating its own software products, SVI is able to become a more competitive player by being able to offer both products and services with less dependence on 3rd-parties. SVI is looking for Business Analyst (BA) Trainees who will be part of the development and implementation team for these software products. SVI also needs BA Trainees who can be deployed to the US-based/local client projects and BA Trainees who can be part of the management team for the the service oriented business.

Skills

- Excellent verbal and written communication skills
- Effective stakeholder engagement
- Good in conflict resolution, decision making and problem solving
- Good listener and communicator
- Confident presenter
- Effective in working with a team or individually

Requirements

- Candidate must possess at least a Bachelor's/College Degree in Computer Science / Information Technology, Industrial / Computer Engineering, Business, Finance or equivalent.
- With good scholastic records
- Fresh graduates are encouraged to apply
- Must be willing to work onsite at SVI office in Pasig City
- Full time positions available

Responsibilities

Qualified applicants will undergo a BA Training Program that will start with Basic Programming to learn the rudiments of programming and new technologies.

Upon successful completion of the training program, the BA Trainee will be assigned to projects depending on the necessity and capability of the employee.

- Analyze business requirements and recommend solutions
- Perform requirements analysis, planning and implementation of new or enhanced system to optimize business processes and improve systems usage.
- Prepare the necessary documentation and conduct the user training for the implementation of the proposed system and enhancement to existing system.
- Work closely with the IT teams and Business teams to ensure successful implementation of the requirements that meet the business needs
